## **GUAVA CANDY CATALOGUE**

# PRODUCTION PROCESS

The raw material (guava fruit) used to prepare the guava candy goes to the processing plant, there it is washed, disinfected and classified. Subsequently, the pulp is separated from the seeds.

(pulping)

# PRODUCTION PROCESS – COOKING AND FORMING

The pulp of the fruit is mixed with other ingredients until a homogeneous and consistent mass is obtained. A system of pots and pans with mechanical mixers are used for cooking. Mineral coal is used as a fuel.

The mass is poured into the mould alternately with molten caramel to create red and yellow layers.

# PRODUCTION PROCESS – COOLING, CUTTING AND PACKAGING

Once the cooking and moulding process is completed, the obtained product is placed in wooden boxes and it cools down and becomes hard. Than it is cut to the agreed shape and size.

The product is packed in different sizes between 5g & 50g. When packed into standard paper sheets it has a shelf life of 6 months when stored as instructed.

# Wrapping

## PRODUCT PACKAGING

The primary wrapping (in contact with the product) is fully compliant with international food standards. The material used is adequate to the physicochemical composition and nature of the product, it provides desired resistance, oxygen permeability and moisture. Our Guava Candies retain their original flavour and fragrance throughout their useful shelf life.

The material and properties of the secondary packaging will depend on the customer's needs. An example can be seen on the picture on the previous page.

<b>PACKAGING</b>	<b>MATERIAL</b>	<b>THICKNESS</b>
Primary	Polypropylen	20 µm
Secondary	Paper or cartboard	Various options
